

Ann Arbor, Mich.  
Nov. 11/94/

Dear Papa:-

I like the plan you have adopted in reference to P. G. work, and your scheme for Pedagogy seems to be quite complete. I think of nothing to add to it. As to the work in Mathematics, I hardly see what courses can be offered

that can be pursued in absentia. The Calculus we have here is a much more complete work than the one you use and might well be made a P. G. course. If I were planning the work, would also include

Differential equations, Higher  
Plane curves, Solid Analytic,  
Higher Mechanics, and  
Seminary courses in Algebra  
and Geometry. Of course  
work of this kind can  
hardly be done without the  
constant aid of a teacher.

I wrote Uncle Ran in  
reference to my work here to  
see if it would be accepted for  
an A. M. - If I should stay  
to the summer school and  
finish the work required for  
my A. B., they will not confer the  
degree until '96, tho I would not  
have to come back.

We had a lecture last night  
by Bro. Willett and it was  
fine, - he is always an interesting  
speaker. Also had an  
excellent sermon this morning

by Bro. Newman of Detroit -  
one of <sup>the</sup> most powerful sermons  
I ever listened to. -

You will be surprised to  
know that I have gotten  
into the bad <sup>(?)</sup> habit lately of  
getting up at 5 o'clock a. m.  
to study. Really almost a  
revolution, isn't it? Feel that  
I will like it, if ever I get  
use to it. Have heretofore  
been sitting up until 11 or  
12 and getting up at 7. Am  
now retiring at 10 and  
getting up at 5. Don't know  
just how long I can keep  
it up.

Sister wrote me some time.

ago that Mr. Wade  
would be in school here this  
year. Is he here? I have  
never been able to find him.  
He has not been around to  
church yet.

Love to all.

Addison Clark.
