Oscar E. Mounig.

Ft Worth Tex.

Dear Sir: I am pretty sure that if you could get Woodward to say so that he found a meteorite while working for Williams, it could have been found either on the D- or on the old Escarbado camp of the X.II. Williams run both of these places at that time. I cannot remember who it was that told me that Houser had found a meteorite, a personal friend of both of us I am sure.

I talked to Houser when he

Came through here going out
there to work. I did not see
him any more so I asked some
one in Slimmilt what had
become of him and he told
me the story that Homer had
found the stone and had sold
it for \$80⁰⁰ and had quit his
job and moved over in N.M.
He was afraid that Williams
would claim the money.
I hadn't run on to Homer since
and have not thought to ask
about him or the meteorite
while I am around Slimmilt
will try too next time I am
in Slimmilt.
I am sure the story is true
and would sure investigate.

I have not got around to doing
any sphere cutting. Think I
will try ones out of the stone
on the Porchsoon.

I have one extra sphere
made of Howlite.

This material makes pretty ones
It is better than 2 in. through.
Would sell it or trade it.

The last one I tried to make
was of Hematite from England
I was a mess. made one of
Hematite from Del Rio Tex
and it is fine.

Yours truly

Joe H. Green
