

1952, Nov. 14.

Mr. Joe H. Green:
Hereford, Texas.

Dear Mr. Green:

Just a note of heartfelt thanks to you for your kindness and interest in going with us and helping get a general location on the possible meteorite in your county. I have written again to the Mrs. Charlie Owen at Vernon who first told me about this, and if I get any further information from her, will transmit it to you.

You see Philip Miller and tell him what we are up to, asking his help in being on the lookout for anything of the sort. Actually, the way it is described by Mrs. Owen it may have been an iron meteorite instead of a stone one, if it is still really there.

Thanks for the gift of the fulgurite samples. I was glad to get these. I believe all I ever saw before were smaller.

By the way, you spoke of one of the Dimmitt stones being found at or near the cemetery. I am interested in this because I am keeping a distribution map of the Dimmitt stones. Do you know who got this stone and which way and how far from the cemetery it was pick up? I enclose a postcard for a short answer.

My best regards to you and your folks.

Sincerely yours,
