

1092, March 30

Mr. Jim Wesroott,
P.S. BOX 327
Sedona, AZ 86336

Dear Sir:

Please send me the largest slice you have left of the Beaver, OK. meteorite. The story of your find is very intriguing. It sounds a little to me like a fairly well preserved if not fresh fall, since I would think an old meteorite would have the typical brownish crust instead of the color you describe. If you unearth any history of its recovery it would be most interesting to hear more.

Should any more of the Belle Plaine, Kan., come available, count me in. I should explain that my eyes have failed me entirely, due to retinal wear-out, which is not operable. I made a mistake in the box number when I first wrote you and the postmaster there showed very little imagination in not getting to you, but just returned it to me!

Then I was in Scottsdale, AZ, from March 6 to 16 and tried every day to get you on the phone, but that was during one of your firld trips, I am sure.

If there are mistakes in this typing, please excuse and correct them, as you will know why. By all means look me up if you ever come this way. Actually I am gradually giving much of my collection to Texas Christian University and taking large tax deductions, so I am glad to have evidence of the prices you are getting. For years I did, on a small scale as time out from my business duties would afford, what you are doing now on a full time basis, and I am convinced there are still many meteorites laying around awaiting recognition and retrieval. Good luck

Sincerely,
