

not in

CHECK LIST:

Is the object **solid**, not porous?

Is the object of **irregular** shape?

Is the object **heavy** for its size?

Is the object **black or brown** on the outside?

Does the object show **metallic iron** on a ground surface?

Is the object **different** from the country rocks?

	Yes	No
<i>Solid</i>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
<i>oblong</i>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/> <i>no</i>
	<input type="checkbox"/> <i>No</i>	<input type="checkbox"/>
	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<i>yes</i>	<input type="checkbox"/>	<input type="checkbox"/>

If you check all "Yes," the object is almost surely a meteorite. In a few cases, some of the answers can be "No" and the object may still be a meteorite. If most of the answers are "No," the object is probably not a meteorite. You may use the address below as a label in writing or mailing samples.

Mr Oscar Morrig.

Dear Mr Morrig,

Just received your letter and will say I have a piece of the great Arizona meteor I have a full detailed of pictures and a full history of the work of uncovering of this great object of outer space. I suppose you have visited the this great crater this meteor is black I have a piece that will weigh about 4 or 5 pounds it is porous and extremely heavy the piece I have come from 600 feet under ground they are still drilling to find the extent of this great object. the crater is more than 4000 feet across they have drilled more than 1700 feet but haven't found the bottom. The objects I am writing about are not common to this region.

Three of them belong to the same
objects, one are 3 miles south
of the two here at my home
no person here seen them
that had any idea of what ~~one~~
meters look like, as I told you
in my other letter they were
dug out of sandy fields about
1 mile apart the other none
fell about 30 miles south but
their shape and appearance
are the same on Crooked
atlas are perfect cylinders
or oblong the inside of the
one that was open are
rust or red like firey rust
these three objects are on a
line running south west to
North East and are readily
identified as the ~~same~~ pieces
of the same body.

I would not ask for the owners
of these objects & let me break
or disfigure them

Your suspect

Chas Deaton Vermont Vet
