

Fort Worth Texas
Sunday, Sept. 17, 1961

Mr. Mounig;
Fort Worth, Texas

Dear Sir: I am not trying to start something sensational, nor am I trying to excite anyone when I finish this letter.

This concerns "something" I experienced this Sunday, 17th when I drove up to Anne, Texas, some 10 miles north of McKinney to visit relatives. While there about 3 P.M. a small airplane passed over. I looked up (straight up) and my attention was attracted to 3 or 4 patches of milky colored gases or smoke. Of course never looked for the

plane. These pockets were visible.

(I seem to see some 20,000 or 30,000 feet apparently.) These were moving toward the west. Perhaps these are only weather signs and occur in the fall of year? or if I am right, hot and cold masses of air moving. The day (Sunday) was almost perfectly clear.

Perhaps you have discovered these milky gases or smoke in the elements. If you have an answer, I would like to hear from you.

Mr. Morning, I am a "victim" of flying saucers, back in 1947, about 20 July. The Telegram, Abilene Reporter-News

and Wichita Fall - Quincy Times
 published same at that time,
 and I had some 8 or 10
 witnesses, I was publisher
 of The Shrockmorton (Texas)
 Tribune at the time, I
 am now line operator at
 the Dallas Times Herald.

One thing for sure, this
 may be good reading for
 you. Who wouldnt be glad
 to get letters on such
 subjects? It maybe that
 your mail box is "cluttered
 up" daily of my kind of
 letters.

would enjoy visiting you
 some time and see your
 apparatuses. Have worked
 most all shops of newspapers
 in Fort worth before going

To Dallas 6 years ago, worked
Dallas news 4 years and
Dallas Herald 2 years. Been at
it 38 years, and a family man.

Mr. Monning these gaseous
jackets ran mostly in
this pattern (3 p.m. Sunday) at
Anna, Texas (10 mi. N. McKinney)

S

These, you know (gases) don't
have too good outlines, ^{naturally} suppose
these elements from the outer
most (height) of nucleus? not
excited, perhaps should be, &
remain,

(for file)

yours truly
