

1983, Feb 3

Mr. Carleton B. Moore.
Center for Meteorite Studies
Arizona State University
Tempe, AZ 85281

Dear Carleton,

You did not answer my query as to whether you would want me to send another Bells, Texas, specimen which I offered. It was not recovered for a month or so and went thru hurricane rains, but nevertheless seems to be in very good condition, tho it has split in the middle rather clearly. It is rectangular in cross section and could be easily cut for more material.

Let me know because I may be coming out there later in the spring, probably in late March or early April, about the same as last year. I would bring it with me or ship it sooner.

Would it be well at that time for me to bring back the remains of the other two pieces, Bells and Crescent?

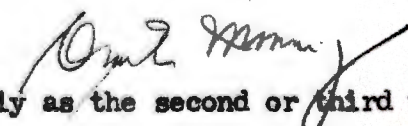

I appreciated your letter of Jan. 14 and fully approve of all your actions. Thanks for the information. My eyes are very, very worse as you can sense.

Do let me know whether you want the other Bells and whether I should plan on bringing back the first Bells and Crescent samples, if you are thru with them.

You know if anything ever happens to me, I leave all my meteorites to Texas Christian University here, in care of their Geology Dept. Dr. Lee Smith is now the head, and Dr. Arthur J Ehlmann, is handling all the meteorites. I AM STEADILY GIVING THE REST OF MY COLLECTION TO THEM AND THEY ARE STORED IN AN EXCELLENT FIREPROOF BUILDING.

My best regards to Chuck.

Sincerely,

P. S. WE may be out there as early as the second or third week in March.
