

# WORLD RECORD METEORITE

Photograph by Cynne Arnold

In October 2005, meteorite hunter Steve Arnold discovered a 1,430-lb. pallasitic meteorite on a farm in Kiowa County, Kansas. It is the largest pallasite found in the United States and the largest oriented pallasite known to exist. This extraordinary meteorite, brimming with crystals of peridot, has been featured on NBC's *Weekend Today* show, ABC, CBS, CNN and the Discovery Channel, and by Associated Press.

**Meteorite on display from January 27 – February 6, 2006**
