Box 190
Albuquerque, New Mexico

Dear Lincoln:

I have a number of DePort, Texas iron meteorites and will be glad to send you what you need. I will try to pick a couple of specimens weighing in excess of one ounce each so you can have a choice.

It may take me a day or two to get around to this but you may expect these. I have noticed that some of the DePort irons seem to rust and deteriorate much more badly than others, presumably due to a difference in lawrencite content. If possible, I may send you one of each kind. The very rusty ones will have ~~a couple of~~ layers of oxide that you will have to knock off. *Crumbling*

I did not do any meteor observing during the week of the Bielids from about the 16th on we had cloudy weather so that I did not **try** *The Leonids* at all and truthfully I did not even try to watch for any of the Bielids.

Yours sincerely,
