

Deport, Tex.  
June 21, 1933

Mr. Oscar Monnig,  
312 W. Leuda,  
Ft. Worth, Texas.

Dear Sir:

The meteorite was found in a heavy black land belt known as Blossom Prairie. There were no other rocks in the piece of land.

The object is not broken or cracked, it weighs a pound, and six ounces, and is about half as large as a mans fist. It is

coated with a thick  
layer of rust which  
shows that it is metal,  
and it has been tried  
with a hack saw and  
file.

There were several  
other ~~objects~~ objects of  
the same kind found  
in the piece of land  
adjoining ours last  
year. They sold for a  
good price, and proved  
to be meteorites,  
I have not tried  
to sell this one, but  
will sell it for a  
reasonable price.

I'll take six dollars  
a pound for it.

Yours truly,  
Ray Williamson

### Fragment Meteorite Found Near Deport.

Roy, son of S. A. Williamson, living on the John G. Wright farm, east of Deport, found a fragment of a meteorite while working in the field recently. It is about half as large as a man's fist and weighed a pound and six ounces. Mr. Williamson brought it to the Times office, where it resisted the efforts of a file and hacksaw. It evidently had a heavy percentage of nickel steel. A heavy coating of rust indicated it had reached the earth some time ago.—Deport Times.

Deport Tex  
June 29, 1933

Oscar E. Morning;

Dear Sir;

I am sending the meteorite  
to you and except your proposition  
I dont know how many and  
what weight irons were found  
on the farm next to me but  
will try to find out and let  
you know.

yours truly,

Roy Williamson.
