

1957, Dec. 9.

Mr. Mitchell Gunnell,
3365 East Kentucky Ave.
Denver 9, Colorado.

Dear Mr. Gunnell:

The two boxes of meteorites arrived in good condition. I will keep the two smaller specimens of Weston and Estherville and check for \$90.00 is enclosed.

We had a moderate fireball over South Texas last night, and by the aid of some phone calls I have it approximately located. I doubt if it yielded any meteorites, but I keep plugging at this type and once in a while run into something.

Should I be back in Denver next year, which now seems possible, I'll try again to visit you and see some of your specimens. My interest in minerals came by the back door route, and I know very little about them in general. My primary avocation for years has been astronomy, and then meteorites I found I had to learn a little about rocks and minerals--but it has been very little.

Yours sincerely,
