

1982, Nov 13

Mr. Feather Wilson,
Placid Oil Co., Geology Dept.,
3900 Thanksgiving Tower,
Dallas TX 75201

Dear Sir:

Thank you for your courteous and informative reply to my call about the impact site in the Carrizo sand south of Uvalde. I have inquired at T.C.U. for a copy of your reference and will enjoy it, I am sure.

I am quite well acquainted with Dr. Arthur Ehlmann there, as well as his successor as the head of their Geology Department, Dr. Lee Smith.

Several of my friends and I have worked on meteorites since 1936 and most of the collection is being donated to T.C.U. Dr. Ehlmann has kindly taken a real interest.

I was personally acquainted with the geologist who found the Hico structure and he took me down there some years ago. You possibly know he was killed in an automobile accident.

I appreciate greatly your hint that you might be able to count me in on a trip to the formation south of Uvalde, and would be happy to go if proper arrangements could ever be made. I must confess, however, that I am 80 and my vision is greatly impaired by what the medico's choose to call macular degeneration, which merely means my retinas are worn out and cannot be repaired by any operation. Hence my many typing errors.

I surely hope to meet you and talk with you soon.

Sincerely,

P.S. We sold our family business and I retired nearly two years ago. I never studied geology academically as I took law and practiced for a time.
