Pictures by Month ▾

[This Month](#)

[Cold Bokkeveld](#) contributed by Shawn Allen, IMCA 1633

1.2 grams. [CM2](#)

TKW 5.2 kg. Fall observed October 13, 1838, in Cape Province, South Africa.

Found at the green arrow [on this map](#).

### Shawn writes:

This meteorite fall can't get any better when Cold Bokkeveld is the first CM meteorite fall and the first meteorite fall to come from South Africa. What a gem to have in any meteorite collection. The fragment I am showcasing on Meteorite Picture of the Day is a 1.26g fragments and looks fresh as the day it fell :)
