

Cranford Sop Detant

16 lb 2 oz

1965, Nov. 4.

Mr. H. V. Schulz,
2402 Sinclair St.,
Midland, Texas.

Dear Mr. Schulz:

I put the Cranfills Gap meteorite back in your workroom as agreed the morning of Oct. 25. I trust you found it all o. k. and will appreciate a note on the enclosed card that you got it back all right.

it

We displayed it in a locked glass case all during both days of the sessions of the meeting in the banquet room of the Lincoln Hotel, where the scientific papers were read. I am sure every one in attendance looked at it with interest and I took it out and showed it to several groups who specially wanted to see it. I thank you for the loan.

I weighed the main piece on scales in a supermarket and it is 16 pounds 2 ounces. The small piece you kindly gave me is perhaps an ounce or so: I have not weighed it. Figuring that your end slice weighs several ounces and that the piece your brother took off weighed a pound or two, the total of the original was probably close to 18 pounds or more.

You will hear from me further as soon as I hear about the classification; I am sending the entire small piece to Dr. Brian Mason so he can give me this information.

Sincerely,
