Hi Tim. I don't have any info from Brian yet (he's at a conference in Italy this week) or the file from Archives (I checked with the Registrar who ordered it for me yesterday). I have looked to see what information we have on our Bluff specimen, and feel confident that all we have is what's left of the 3136g mass we acquired in 1901 in exchange with O.C. Charlton. In the catalog it says "nearly half of mass" so I am sure this is Cedar #3. We have no PS's and only one PTS of Cedar which has the same catalog number as the 3136g piece, so must be from it. I hope this helps. Will send further information as soon as I can. Linda
