

1986 1 24

Mr. Jim Westcott

Sedona, AZ

Group Aka iron meteorite

Was this main mass heavily or lightly oxidized when found? Did the crust  
flake off after it was stabilized on the surface?

What was the texture of the soil when it lay? Was it sandy or black loam?

Did you have any idea of its path? ✓

Have the various cut surfaces or pieces of iron meteorite or they're stable? Or

The pieces resting on the soil surface:

Did you have to use surface soil layers or the ones?

How do you recommend keeping it from being polished or polished with a design? ✓

My eyes are so low but I think I can see the fine

well.

I will give this to the American University <sup>has</sup> to D.A. 1.1.20.
