

100205 CBM

Oct 13, 1975

Dear Oscar -

As usual I was pleased to have you visit us last week. I am always interested to hear about your meteoritic adventures.

Our microprobe analysis of your Haven, Kansas chondrite gave a olivine composition of 20.5 Fe. This makes it a bronzite or H group chondrite.

Best wishes

Write 10/27/75 asking if this Haven was classified the same.

Sincerely,  
Carlton
