

price of Nagy's book.

June 12, 1975

Dear Oscar

I will attempt to answer your postcard and letter together in this letter. If you promise not to tell anyone (because I have an agreement with the publisher) I can get you a copy of Nagy's books and the Buchwald book both 40% off. The members of the Optical Society will be offered a 25% discount for the Buchwald book - I don't know about the Nagy book but I will ask him to inquire. I can send the Nagy book now since it has been published but the Buchwald book will not arrive until about September.

I have a thin slice of Hoven of 25 g. It is a rusty-black chondrite with no particular distinction. I am enclosing a copy of the original article on the stone. How much material Forley got to study is a problem. We can run an olivine composition on our piece and a small chip of your piece if you wish to see if they are identical. This can be done rapidly on our microprobe.

The 1966 Hey Catalog is the most recent. I have heard a supplement is being prepared for publication soon.

If you wish to borrow our small
piece of Hoven I will be glad to send
it. We are always glad to help you in
any way we can.

With best wishes.

Carl
