AMATEUR ASTRONOMY
Specializing in METEORITES

1972, Oct. 12

Mr. Glenn I Huss,
P.O. Box 2098
Denver Colo 80201

Dear Glenn:

When I was in Denver recently I really wanted to come out to your house and I appreciate your hospitality in asking me. But I didn't because my wife wasn't feeling too well that particular day and I could tell she rather wanted me to stay with her. I didn't say anything about it over the phone but that's why I kept you so long, for which I apologize.

I don't really do as much final field work on the occasional minor fireballs I work on in this region as I should. About the time I decide I know about where something might have fallen, so much time has elapsed and so many other things have happened, both astronomically and in a business way, that I seem to just put off indefinitely going out for a day and beating the drum in that neighborhood for meteorites.

I would be mightily opposed to any federalization of meteorites and will do all I can against it. I am on writing terms with my congressmen but doubt if I have any great influence with them. I have not donated to any of their campaigns because I feel this would be money thrown away with all the big donations you hear of floating around. I'll sure speak out against it if anything comes up in our meetings.

I'm still not sure about going to Chicago. Bob Brown from here may go with me if I decide to attend. The papers of these high-brow scientists are not too enticing anymore. I may go on a trip to California for about 10 days soon and I've really done enough traveling for the year.

A very nicely preserved stony meteorite of some 10 pounds or so (8 inches by about 4 x 4) has been identified at Waco and I am in touch with the situation, but the owner was a former teacher at the school and his widow will probably give it to them. I am angling for it or a part of it. I'll keep you informed; it's apparently an ordinary chondrite, and nobody knows where it was found!!!
