

Box 36 Holliday Tex

July 30, 1968

Dear Mr Monig:

I am returning the map location marked where the fragment was found.

I drove down Highway 25 to where it intersects farm to market Rd 368 but it was too hot to walk down to location.

You will come from Archer City on Highway 25 to where it intersects 368. Turn right on 368 to producing oil lease - about $1\frac{1}{2}$ or 2 miles. You can probably turn right through lease to Oil pipeline which runs N + S through Canyon or you could continue on 368 to where it crosses pipeline. Turn to Right - South) on pipeline to where the

pipe line to where it enters
the Canyon. The last time I was
there you couldn't drive a car
down into the canyon but had
to walk about $\frac{3}{4}$ mile to where
I have marked a mt. on E. side
of pipe line. This abrupt little
hill is made up of heavy strata
of rock & the only hill there. We
always used it as a point to
locate any fossil bed we are
trying to return to.

From this hill you will go
East - down canyon - for about
 $\frac{1}{4}$ mi where there is an old
stock tank on the south.

I picked up the fragment
about 100 yards west & possibly a
little south of stock tank.

There is a way of going from
here & coming in on the
high point I have checked

on map but it would be im-
possible to mark this on map

If you ever want to go to
location I shall gladly go
with you. Just let me know
a few days before you intend
to come up.

If there is anything I can
do to help you I will gladly
do so

Sincerely

J. Jackson
