

Box 36 Holliday, Tex  
July 19, 1960.

Dear Mr. Menzies:

I am in receipt of your letter & card concerning the meteorite specimen del. to you by Mrs. Pridemore.

I found it in Rattle Snake Canyon, 10 miles S.W. of Holliday in Cochise Co. about 10 years ago. I had intended mailing it to you & when I found out my Sister knew your wife, I asked her to deliver it to you.

Dr. A. J. Romer and Stan Olsen, paleontologists from Harvard Univ. and I were hunting fossilized remains of *Dimetrodon*. I noticed

this object & picked it up. Dr. Romer said he believed it to be a meteorite. I tested it with compass & it had a strong magnetic pull.

This canyon has some very fine fossil beds & has been worked for years. Dr. Romer has taken 11 or 12 skeletons from one pit. He has worked this country for 30 years or more. I have spent lots of time out with him.

I am interested in all the general, or natural sciences.

Will be glad to help you in any way. Sincerely,  
J. R. Jackson
