

Cotton planted first part of March-
Rained first part of April and soon
afterwards cultivated cotton at which time

Our men found this- they hit it while plowing
and carried it out to the end of row- However
they told us nothing, thinking it was just an or-
dinary rock- then yesterday, almost a year
after we planted cotton last year- and the rock
was not there at that time- we go to field
to plant cane on same land- my son sees the rock

(over)

and questions the man who was operating the planter- he was the same man whom had carried the supposed rock out of field- The time element fits in with when the meteor was seen by several local people .
