Fort Worth, Texas

Dear Mr. Monnig,

A farmer at LaVilla, Texas thinks she has found a meteorite and I wanted to send a sample and description to you for verification:

Weight $42\frac{1}{2}$ lbs, found about 11 months ago, plowed out of a field, egg shaped, $32\frac{1}{2}$ " circumference around one way, 26" circumference around short way, $11\frac{1}{2}$ " long, 8" wide, slightly magnetic, enclosed pieces were chipped from main mass with a chisel, red areas on pieces was outside of mass.

I certainly enjoyed my visit with you a few weeks ago. With all the best personal regards,

Sincerely,

Paul
