

1973 June 11

Mr. Glenn I Huss,
American Meteorite Laboratory,
Box 2098
Denver Colorado 80201

Dear Glenn:

Thanks for the work on the little Toluca piece; check is enclosed. You are most reasonable in this modest charge.

I am going to follow your suggestion and let you re-do the Nazareth piece, but I do not expect it free. We have had a very wet spring and I know my house is quite damp at times. Moreover, my wife or her maid who comes occasionally found this specimen in an open box, the way I was keeping it, and thought they were doing the right thing by putting the cover on. This probably did not help any as I did not discover it for some weeks.

I sent you the piece by registered mail today. Please keep it until after July 11 as I leave in a couple of weeks and do not expect to be back before then. That should give you plenty of time to "soak" it, and I am in no hurry for it. BUT send me a bill for your work when you return it.

I have to go to Washington on some business when we get back July 8 and I hope to be able to see Henderson at U.S. National while there.

I had isolated reports (one each) of a mild fireball seen from Richardson (near Dallas) to the northwest on May 9 and another one seen from Tishomingo May 15 but neither sounded spectacular enough to be promising and nothing else developed on either one.

Sincerely,
