

Here's the pics...

Again, I would like to have a slice framed for the school, was wondering about the value of the rest. I realize this depends on the Nomenclature Committee but just wondering.

Thanks  
Todd

The proposed name is New Deal and it is an Ordinary Chondrite H6 S3 W2; olivine Fa18.0±0.0 (n=7); low-Ca pyroxene Fs16.6Wo1.2 (n=10) I was just trying to take one slice and mount it in a frame for the high school science dept - if it does get named for our town. I will contact them as soon as I hear - they said this week or next.  
Thanks for your help...

Todd

Hello,  
Congratulations on finding a meteorite, and on doing the right thing, and getting it classified. Do you know what the proposed name is? And what type it is? I would like to read about it when it is published on the Meteoritical Bulletin.  
As for getting it cut, I would recommend Montana Meteorite Lab, the owner Marlin Silz is really an expert, here is his website address: <http://montanameteoritelab.com/>  
But I would recommend that you don't have it all cut up in small pieces, if you ever decide that you want to sell some of it, museums and high-level collectors prefer large pieces.  
Good luck.

Somebody sent you an email using the form on your website. This is what he typed in:

**Name:** Todd Smith

**Street:** Box 42

**ZIP:** 79350

**City:** New Deal

**State:** Tx

**Country:** USA

**Phone:** 806.535.0165

**Mobile:** same

**Email:** [lubbinv@gmail.com](mailto:lubbinv@gmail.com)

**Message:** I recently found a meteorite , had it analyzed by Dr Alan Rubin and submitted to Nomenclature Committee -awaiting their answer. I was thinking of making

a display of it for the school and was wondering how to locate someone to slice and polish it for me.

Thanks
